Definition of Common Grades

Hot Rolled

Checker (Floor Plate)

Definition of Common Grades

Mild Steel

No minimum physical qualities specified. For non-critical applications. Easily welded and formed. Also called Max.33, Black plate, Boiler plate or just Hot Rolled.

A.S.T.M., A-36

Most widely used general purpose steel, **36,000 P.S.I. minimum yield strength**. Readily sheared, flame cut, formed or welded using good shop or field practices.

G40.21-44W

Most common grade for structural uses and welded construction with **a minimum yield strength of 44,000 P.S.I.** Can be sheared, flame cut, formed or welded using good shop or field practices.

G40.21-50W

Same as 44W with **yield strength improved to 50,000 P.S.I.**

G40.21-50A

Low alloy steel with **minimum 50,000 P.S.I. yield** and improved atmospheric corrosion resistance. Similar to **A.S.T.M., A-242**.

Abrasion Resisting

Wear resistance approx. twice that of mild steel with **yield strength of 60,000 P.S.I.** In shear cutting, the capacity rating of the shear would be discounted approximately 40%. Flame cuts easily but will flame harden the edges. Extreme care should be used in any forming procedures.

Quenched & Tempered, 100,000 Min. Yield

Heat treated alloy plate with **100,000 P.S.I. min. yield strength**. Provides wear resistance roughly three times that of mild steel and has excellent low temperature toughness. Requires care when welding or forming.

Pressure Vessel Quality

A285 Grade C

Plate of low to intermediate tensile strength for pressure vessels. **Minimum yield strength of 30,000 P.S.I. and tensile strength of 55,000 to 75,000 P.S.I.** Easily sheared, flame cut, formed and welded using good shop practices.

A515 Grade 70 and A516 Grade 70

A515 is intended for intermediate and high temperature service in boilers and other pressure vessels.

A516 is used in pressure vessels at temperatures where improved notch toughness is important.

Minimum yield strength for both A515 & A516 is 38,000 P.S.I. with tensile strength of 70,000 to 90,000 P.S.I.

A.S.T.M. A242 Type 1

Often called up by one of its trade names (ie. Cor-Ten A, Stelcoloy or Dofascoloy) has approx. four times the atmospheric corrosion resistance of mild steel.

Minimum yield strength is 50,000 P.S.I. and is weldable using practices for the grade and intended service.

If you require more information regarding grades and specifications, please inquire!

12 = 1Foot

Extended Service Hours

Units for Approximate Weights in Pounds of Various Metals

IRON

Multiply contents in cubic inches by .2777.

STEEL

Multiply contents in cubic inches by .2836.

COPPER

Multiply contents in cubic inches by .32118.

BRASS

Multiply contents in cubic inches by .3112.

LEAD

Multiply contents in cubic inches by .41015.

ZINC

Multiply contents in cubic inches by .25318.

TIN

Multiply contents in cubic inches by .26562.

ALUMINUM

Multiply contents in cubic inches by .09375.

BAR STEEL

Find area in inches of one end, multiply by ten and divide by three to weight in pounds per lineal foot.

UNLIMITED

METALS

Unlimited Metals, A Misteelco Company.

454 Innovation Way Unit 8. Woodstock, ON. N4V 0A2
